Department of Information Systems
Bachelor of Information Systems
Lab Activity 3
IS312 Web Application Development

Weighting: 3%
ULO addressed: ii, iii, vi, vii
Due date: 11:59 PM, Wednesday 16th April 2025
Total Marks: 30

Bootstrap Framework

Instructions:

1. Attempt activity 3: Creating the Future Technologies Website with Bootstrap on page 700 of the recommended text book.
2. You will attempt this lab activity in your allocated groups (pairs).
3. Your group name with your names and date in the all the Save all files in a single folder called 312Lab3 and submit via Moodle before due date.

Problem:

Lab activity three (3) is based on Bootstrap, a popular Front-end web design framework used to create responsive webpages.
This lab activity will allow you to apply your creative and problem-solving skills to design and implement a solution.
You are required to create a webpage using Bootstrap Framework as per the instructions on page 700 of the textbook to address the marking rubric below.

Marking Criteria

Criteria	Description	Marks
Design new webpages using Bootstrap Framework.	- design a new home page and two other webpages (and) using the Bootstrap framework. o Home page (`index.html`) - introduction to future tech and navigation o Innovations page (`innovations.html`) – Discuss specific technological advances o About Us page (`about.html`) – Team introduction and project purpose - Use the starter template from the Bootstrap webpage	5
Use Bootstrap Components	- Use Bootstrap components at a minimum: o navabar, - for responsive navigation bars for all viewports o jumbotron, - to capture user's attention o grid system - to create columns of content	6
Create Style Sheet	- Create external style sheet with three custom style sheets	3
Text Styles	- Use Bootstrap text utilities classes to style texts	3
